Week 1:

The first week of training at the MediTec training project in Malta was focused on introducing the trainees to each other and to give us an overview on the training program as a whole, in addition, we attended 3 sessions entitled “Students as Teachers” in which we learned how to become a great tutors from all different aspects. During these 3 sessions we also went over some clinical anatomy by solving different clinical cases.

Week 2:

The second week was oriented more towards management and medical research. We attended 2 sessions regarding “Health system management and Leadership,” in which we learned how to keep up with the patients and what are the necessary information that we should obtain from the patients for statistics use and research. Furthermore, we learned about the latest medical technologies used at Mater Dei Hospital (Mario the Medical Robot), and we finished the session by taking a tour around the hospital to learn about the different wards and their specialties and provided services. Last but not least, we ended the second week by going through various medical researches with Dr. Lalit.

Best Regards,

Nayef Abu Safieh
